National Voices Project

Understanding barriers
Measuring opportunities
Informing initiatives for change

For children — through the voices of adults in their communities

Local Impact Report
Wayne County, MI
2012-2015
Introduction

The NVP offers an unprecedented perspective on community-level opportunities for children throughout the country, in the domains of health and nutrition, education and learning, and economic security - through the eyes of adults whose occupations and volunteer work affect such opportunities. In other words, the NVP reflects the perceptions of individuals throughout the United States who are in a position to improve children's opportunities in the future. We generally use the word "children" throughout the report to describe children from age 0-18 years, unless otherwise noted.

With support and collaboration from the W.K. Kellogg Foundation through the America Healing Initiative, researchers at the University of Michigan are leading the National Voices Project (NVP) from 2011-2016. The central goals of the NVP are to examine the sources of racial/ethnic inequity and other disparities for children in the United States today and identify interventions that address disparities effectively.

Key Findings

• One hundred to two hundred different residents of Wayne County responded to questions in each of the years of the National Voices Project (NVP) annual survey.

• Along with other communities participating in Collaboratives for Health Equity, a growing proportion of respondents from Wayne County perceived many racial/ethnic inequities over the years 2012-2015.

• In most years of the NVP surveys, residents in Wayne County most commonly perceived racial/ethnic inequities related to housing. They less commonly perceived racial/ethnic inequities related to food and nutrition, and health and healthcare. Most of these perceptions were reported more commonly than residents of other communities across the United States that do not participate in Collaboratives for Health Equity.

• In Wayne County, from 2012-2014 residents commonly perceived lots of opportunities for children to have neighborhoods without violence, but that optimism was reduced substantially in 2015.

• Respondents in Wayne County most commonly and consistently perceived the most availability of hospital care and primary care for children and teens, and much less availability for specialty care and mental health care. Reproductive care was also perceived infrequently as being widely available for teens.

• In Wayne County in most years of the NVP annual survey, about one-quarter of respondents rated multiple aspects of education and child care for young children as “excellent”. For young children, they were generally most positive about having a safe environment at elementary schools, and least positive about forms of financial support to help low-income families afford high-quality child care. For teens, they were most positive about opportunities for opportunities to participate in extracurricular activities and least positive about cultural diversity programs.

• In three of the four years of NVP annual surveys, the proportion of Wayne County residents who perceived that family financial situations had worsened over the past year was as great or greater than the proportion that perceived they had improved. The exception was 2015, when 36% thought that financial situations had improved and 32% thought they had worsened.

• Among the programs the Collaborative for Health Equity team nominated to present to respondents in Wayne County in a 2015 survey on boys and men of color, the majority of respondents had not heard of two of the three programs. The program that had gained the greatest community level awareness was Focus Hope.

Amount of Perceived Racial/Ethnic Inequities

The Importance of Perceptions of Inequities

Perceptions of inequities in communities are strongly associated with:
- Lower measures of "lots of opportunity" for health
- Less healthcare availability
- Lower ratings of "excellent" for aspects of quality education
- Barriers to school success
- Perceptions that financial situations have "gotten worse" over the last 12 months

Respondents' perceptions of inequities in their communities was more strongly associated with their perceptions of children’s and teens’ opportunities than was respondents’ age, gender, education, or household income.

Boys & Young Men of Color (BYMOC) Qualitative Analysis
Wayne County, MI
n=140

Research Question: How is your community creating opportunities for boys and young men of color?

Most Commonly Reported Efforts:
- Education/job training
- City partnerships/involvement of organizations
- Sports programs/rec centers/after school programs

BYMOC are helped by...

Education and job training
City partnerships and involvement of organizations
School programs
Sports/rec centers/after school programs
Social programs
Mentors

No differences by race

No different opportunities regardless of color
Great education for all, no differences by race
Equal opportunity employers/equal access

Other themes

Don't know/I am the wrong person to ask
Opportunities are not being created
Not enough is being done

Race/ethnicity of respondent

African American
American Indian/Alaskan Native
Hawaiian Native
Hispanic/Latino
White

Each person represents one comment. Views with at least four comments are displayed.
Mission of the National Voices Project

Led by researchers at the University of Michigan, the National Voices Project (NVP) is an effort to bring the perspectives of thousands of people in communities across the United States to the national dialogue about opportunities and barriers for children related to race/ethnicity.

Boys and Young Men of Color (BYMOC) Survey

The BYMOC survey was conducted in January-February 2015 via GfK, a survey research organization that maintains KnowledgePanel®, a nationally representative web-enabled panel of adult members of households across the U.S. GfK invited 11,644 people 18 years or older to participate. 2,081 respondents completed the survey and indicated they have jobs and/or volunteer in ways that affect education, health/healthcare/nutrition, economic opportunities, social justice or community and civic engagement for children.

This qualitative summary was conducted with respondents residing in the following Place Matters locations: Cook County (IL), Alameda County (CA), Wayne County (MI), Fresno County (CA), King County (WA), Suffolk County (MA), and Bernalillo County (NM).

Methods

Open-ended responses were analyzed to assess for themes and sentiment of the responses from this question: “How is your community creating opportunities for BYMOC?” Each question was coded by two reviewers. All discrepancies between the two reviewers were discussed and recoded as necessary. If a reviewer decided not to change their coding, a third reviewer was invited to decide how the response should be coded. Responses were broken down into 22 main themes:

- Education/jobs/skills training
- School programs
- Volunteer opportunities
- Sports/rec centers/afterschool clubs
- Mentors
- Community events
- Organizations/other sectors (religious, civic, etc.)
- Social programs
- Policy changes
- No different opportunities regardless of color
- No differences, great education for all
- No differences, EEO
- No differences, equal access
- Opportunities not created
- Parent's role
- Teachers/discipline limitations
- Not enough is being done
- Effort is needed by BYMOC
- BYMOC get better opportunities than other races
- They are doing everything they can
- Nationwide issue
- Don’t know/wrong person to ask

Partner: National Collaborative for Health Equity

For this BYMOC survey, NVP partnered with the National Collaborative for Health Equity (NCHE). The mission of the NCHE is to promote health equity by catalyzing collaboration among racial equity advocates, grassroots and community-based organizations, researchers, public health professionals, and other key stakeholders. For more information, visit their website: NationalCollaborative.org.

Mission of the National Voices Project

Led by researchers at the University of Michigan, the National Voices Project is an effort to bring the perspectives of thousands of people in communities across the United States to the national dialogue about opportunities and barriers for children related to race/ethnicity.

The National Voices Project conducts major national surveys twice each year among adults who work and volunteer on behalf of children. These surveys focus on racial/ethnic inequities at the community level that affect children’s health, education, and economic security. For more information, visit the project website: NationalVoicesProject.org.

The National Voices Project team is grateful for the support and collaboration of the W.K.Kellogg Foundation, through the America Healing Initiative.
